

**1** Current plate support Giroform®

*Due to the existing oblique guideway in the small and large Giroform® plate support (see red mark), only the small or the large base plates distributed by AmannGirrbach can be clamped and drilled.*

**2** plate support „Duo“ for DIVARIO®

*The plate support Duo for DIVARIO® has a straight guideway (see red mark). Therefore, all sizes of the base plates made by Mälzer Dental and other suppliers (AmannGirrbach®, Zeiser®, Dentobase®) can be clamped and drilled in just one plate support.*

*Changing the system to our DIVARIO® model system, we are happy to modify your plate support free of charge. In the meantime, we provide one of our plate supports – likewise free of charge!*
